cycle. These stages are called the cell cycle. The cell cycle starts when a cell is made, and ends when the cell divides to make new cells. Before a cell divides, it makes a copy of its DNA (deoxyribonucleic acid). DNA is the molecule that contains all the instructions for making new cells. The DNA is stored in structures called chromosomes ...

Chapter 5 The Cell Cycle Flashcards | Quizlet

The cell cycle is an ordered series of events involving cell growth and cell division that produces two new daughter cells. Cells on the path to cell division proceed through a series of precisely timed and carefully regulated stages of growth, DNA replication, and division that produce two genetically identical cells.
