community structure. We used a comparative approach to examine the in?uence of host ecology and morphology on the diversity of chewing lice (Insecta: Phthiraptera) among 52 species of Peruvian birds. For each host species we calculated two components of parasite diversity: 1) cumulative species richness, and 2) mean abundance.

Community structure, abundance, and morphology Community structure, abundance, and morphology Stevens, Richard D.; Willig, Michael R. 2000-01-01 00:00:00 The role of interspecific competition in structuring communities has been a highly debated issue for the last two decades. The nonrandom nature of morphological patterns within communities has been at the center of this controversy.

Community Dynamics. Community dynamics are the changes in community structure and composition over time. Sometimes these changes are induced by environmental disturbances such as volcanoes, earthquakes, storms, fires, and climate change. Communities with a stable structure are said to be at equilibrium.

Microbial abundance and morphology. In order to begin addressing the effect of elevated pressure and low temperature on the abundance of a coastal microbial community, seawater samples were incubated for different lengths of time at 0.1 and 60 MPa at 3°C in the dark in order to simulate the physical conditions encountered at a depth of 76,000 m.

Ammonia-oxidizing microorganisms play an important role in the nitrification process. In this study, the abundance, diversity and community structure of ammonia-oxidizing archaea (AOA) and ammonia-oxidizing bacteria (AOB) in riparian sediment of Zhenjiang ancient canal were investigated using amoA gene as a molecular biomarker. Clone libraries and qPCR (quantitative polymerase chain reaction ...
