Using Excel, it is possible to hide a row on a worksheet by selecting that row (or rows), right clicking once on the right hand mouse button and selecting 'Hide' from the pop-up menu that appears. To emulate this using POI, simply call the `setZeroHeight()` method on an instance of either `XSSFRow` or `HSSFRow` (the method is defined on the `ss.usermodel.Row` interface that both classes implement ...

Improve Formulas with Cell References . Excel formulas can also be developed using cell references. Continuing with our example, you would not enter the numbers 3 and 2, but instead would name cells where these numbers have been entered (see Using Cell References below for more on cell naming). When you write a formula this way, the formula cell always shows the sum of the numbers in those cells ...
