Visitor perception of thermal comfort in two contrasting ...

The variation in visitors' thermal perception at the same UTCI range suggests that thermal expectation can influence people's perceived thermal comfort, particularly during extreme heat conditions. In other words, visitors felt hotter during a heatwave despite the fact that it was not necessarily hotter than a non-heatwave day.

Maintaining thermal comfort in indoor work environments ...

Urban green spaces offer vital ecosystem services such as regulating elevated temperatures in cities. Less information exists, however, on how urban green spaces influence outdoor thermal comfort (OTC), which is dependent on people's perceptions of the complex interactions amongst ambient humidity, wind and both air and radiant temperatures.

On the study of thermal comfort and perceptions of ...

Thermal comfort is the condition of mind that expresses satisfaction with the thermal environment and is assessed by subjective evaluation (ANSI/ASHRAE Standard 55). The human body can be viewed as a heat engine where food is the input energy. The human body will release excess heat into the environment, so the body can continue to operate.
